SUMMARY

Telecommunications Analyst with experience in IP telephony, VoIP, SIP, and BroadWorks platforms. I work on the analysis, diagnosis, and resolution of high-complexity incidents involving SBCs, telephone carriers, extension provisioning, and integrations with corporate communication platforms.

I have experience handling failures between customers, carriers, and manufacturers, performing SIP log analysis, packet captures (Wireshark), CDR analysis, and troubleshooting in mission-critical environments.

I can easily identify the root cause of problems, document technical procedures, and work closely with NOC, infrastructure, networking, and vendor teams to ensure high availability of voice services. I have an ongoing interest in deepening my knowledge of VoIP, networking, security, cloud, and unified communications.

EXPERIENCE

Método Telecom — Telecommunications Analyst

June 2021 – Present (5+ years) | Brazil (remote-capable)

- Specialized support for IP telephony and VoIP.
- Administration of BroadWorks environments.
- SIP and RTP protocol analysis.
- SBC (Session Border Controller) troubleshooting.
- Extension and IP device provisioning; IP phone and ATA configuration.
- Direct technical dealings with carriers such as Oi, Algar, and TIP.
- CDR and SIP log analysis; traffic capture and interpretation using Wireshark.
- Diagnosing audio issues, SIP registration, NAT, firewall, and codec problems.
- Configuration of enterprise telephony resources.
- Technical support for critical incidents and service ticket (work order) management.
- Preparation of technical documentation and operating procedures.
